

INTERCONNECTION SOLUTIONS FOR CLOUD MIGRATION WITH BUSINESS CONTINUITY

Unbeatable quality and safety levels for enterprise businesses

Together, MAIN and Equinix deliver customized services and interconnection solutions for cloud migration with business continuity that eliminate risks. Our end-to-end cloud migration solutions are built on the most efficient architecture design and genuine SLA understanding.

We design disaster recovery plans with relevant and reassuring SLAs, including database systems. Our SD-WAN optimization of networks lowers costs, increases flexibility and leverages the network density within Equinix. Our data center services include private cloud, IaaS, PaaS, colocation, relocation, migrations and Azure/AWS integration.

The challenges you face

Poor customer experience

How can you provide IT services effectively, with adequate performance levels of all systems and the knowledge required to maintain them properly?

Starting your cloud journey

What should your first steps be towards system virtualization through cloud migration – whether hybrid or multiple clouds – while shifting from CapEx to OpEx?

Ensuring business continuity

How can you avoid the negative customer experience and major profit loss of unavailable applications? How can you quantify the impact of mission-critical systems downtime?

Optimizing your network

How can you overcome the flexibility restrictions and costs of existing MPLS and point-to-point networks when traffic is increasing and aging networks lack optimization?

We can migrate systems, then virtualize and build private clouds based on the VMware system

The key benefits of our solution

In-depth architecture analysis and optimization

Modernizing architecture design, our efficient strategy and planning includes accurate project delivery documentation with proper SLA understanding and the highest product and services standards. complexity and cost.

Education and support all the way to the cloud

Our end-to-end migration solutions include infrastructure and tooling training for the delivery of safe cloud migrations with the right pricing, optimized flexibility and fast execution.

Anti-fragility design

Our optimized disaster recovery options enable effective business continuity plans for database systems, and we ensure unrivalled connectivity and speed with full security.

Networking expertise

Our expertise optimizes network connectivity, lowers costs and increases flexibility, enabling local businesses to achieve global connectivity.

Our leading capabilities enable your success

MAIN Private Cloud

Our dedicated virtual environment – with separate hosts and disk resources – enables the creation of virtual servers in your own dedicated infrastructure, dynamically assigning resources to them. MAIN Private Cloud is implemented on Platform Equinix® – the global platform for digital business integration and connection, hosting digital services and ecosystems that allow you to scale securely.

IT optimization with Performance Monitor

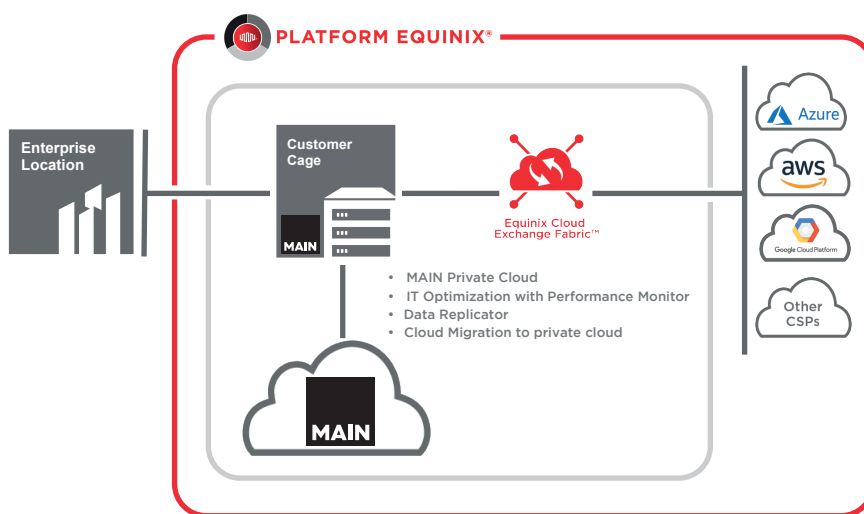

After performing an accurate analysis of your current state, we develop a high-performing solution tailored to your needs and implemented within Equinix infrastructure. Easy-to-use, intuitive software Performance Monitor enables monitoring and analysis of database performance across your infrastructure, clearly highlighting performance problems and precisely identifying their causes.

Data Replicator

Our reliable tool for database replication in Oracle and Microsoft SQL Server for Oracle, Microsoft SQL Server and PostgreSQL databases, Data Replicator provides real-time access to copies of production data without influencing the availability and performance of source systems. With deployment realized within Equinix data centers, we deliver the highest business continuity standards.

Equinix Cloud Exchange (ECX) Fabric™

ECX Fabric connects distributed infrastructure and digital ecosystems on Platform Equinix via global, software-defined interconnections. Available across 35+ locations, it delivers scalability, agility and connectivity over a self-service portal or API. Through a single port, you can discover and reach anyone on demand, locally or across metros, to drive your digital future forward.

Use Case

Migrating a publishing house from on-premise to private cloud

When our client needed to identify incorrectly working applications, optimize costs and environment, and overcome a lack of documentation, we created a new environment designed in HA technology, segmented the network and rebuilt the backup system.

About Equinix

Equinix connects the world's leading businesses to their customers, employees and partners inside the most interconnected data centres. In 55 markets across five continents, Equinix is where companies come together to realize new opportunities and accelerate their business, IT and cloud strategies. We operate the only global interconnection platform, sparking new opportunities that are only possible when companies come together.

About MAIN

Guaranteeing uninterrupted IT system operation, we take responsibility for business data security. As a system integrator with our own technical resources, we migrate systems, and virtualize and build private clouds based on the VMware system. Our enterprise clients can focus on their business growth without worries about their IT, with the added reassurance of our systems engineers' 24/7/365 support.
