DBPLUS

better performance

DBPLUS Performance Monitor™

DBPLUS Performance Monitor™ is a modern software tool for Oracle®, Microsoft™ SQL Server® and PostgreSQL database performance monitoring and analysis. It is a comprehensive software tool which shows performance issues in a clear way and is also able to point out the root cause of the issue precisely. Using our software tool, you get a lot of innovative features allowing you to increase your administrative capabilities to a higher level. You save time and money.

DBPLUS Data Replicator™

DBPLUS Data Replicator™ is highly cost effective and versatile and reliable software for data replication between different database engines and systems. It gives real-time access to copies of production data with zero impact on the availability and performance of the source systems. This tool supports an extremely wide range of data base engines and cloud solutions. Our solution supports Oracle®, Microsoft SQL Server®, PostgreSQL, MySQL, Azure SQL, Amazon Redshift and Kafka distribution system.

DBPLUS Services

Database Performance Management
Database Performance Optimisation
Performance on demand
Business data replication
Database performance in the cloud

Our services are a mix of our solutions and our experience collected as database engineers, top class developers, analytics, architects, and managers responsible for critical applications and data base management. We offer a unique approach to professional services base on guarantee of expected results. Before we start our services we always talk to client and set up measurable result and value of results like e.g., how much we increase performance of database.

ORACLE®

Our competitive advantages

- ✓ Easy to implement without technical skills and project resources
- ✓ Competitive pricing
- ✓ One console for all supported database engines
- ✓ We offer resolution time for application issue – not reaction time
- ✓ Unlimited licenses option for enterprises

DBPLUS Performance Monitor™

- ✓ Our software tool is not only for DBA's
- ✓ Easy to find the cause of root performance problems
- ✓ Automatic detection of performance problem
- ✓ Does not need any extra paid Oracle® options

DBPLUS Performance Monitor™

- ✓ Easy to make initial load (fully automated) by DATA TRANSFER
- ✓ Does not need any agents in source and target databases
- ✓ Parallel read from source and write to target
- ✓ Extremely precise mechanism ensures data integrity
