

Company Snapshot

Industry:
Enterprise Security
Security Operations Centers

Founded:
2010

Products:
SecureVisio Platform,
sales from 2016

Customers:
3 SOCs
20+ enterprise customers

Sales HQ:
Warsaw Poland

R&D:
Rzeszów Poland

Company Milestones

2010
eSecure founded as IT security consulting company

2012
first in Poland interactive Security Awareness e-learning platform

2013-2015
SecureVisio project co-founded by EU's Innovative Economy Operational Programme

2016
SecureVisio commercialization, private investor joined eSecure

2017-2018
SecureVisio deployments in SOCs and enterprises

Company Overview

Business-aware Incident Management

Supreme priority of IT security is protecting the organization's business. eSecure SecureVisio platform provides business-aware IT security management by implementing business impact assessment as integral part of incident and vulnerability management tools as well as based on mathematical modeling the simulators of network attacks and failures that help the organizations to predict threats and avoid critical incidents.

Our Products

SecureVisio Incident Manager

provides complete set of tools dedicated for incident detection (SIEM supported by Threat Intelligence platform), incident management (SOAR), and integrated Business Impact Assessment prioritizing alerts in real time to focus IT security personnel attention on the most important issues. Business-relevant key performance indicators (KPIs) and key risk indicators (KRIs) allow to predict new emerging threats to proactively react and improve protection of the most valuable assets.

SecureVisio Network Map and Attack Simulator

allow IT staff responsible for security management to better understand the organization's valuable assets and their internal and external threats. Network Map is an interactive picture of the organization's network that visualizes logical security architecture and describes security layers and zones. The map provides an inventory of the organization's critical IT assets and using Attack Simulator evaluates the assets' protections effectiveness against variety of attack vectors, including 0-day attacks and APT utilizing unknown vulnerabilities

SecureVisio Vulnerability Manager

uses variety of scanners and CVE feeds to discover vulnerabilities in IT and OT environments and provides dedicated Workflow and Playbook to effectively manage even thousands of vulnerabilities. The tools are integrated with Business Impact Assessment algorithm that helps IT security personnel to quickly identify vulnerabilities with the highest potential

Who is SecureVisio useful for?

Security teams responsible for incidents and vulnerability management and other security operations in IT as well as OT environments.

Managers of security team's accountable for effectiveness and quality improvement.

Business owners accountable for the protection of IT and OT services and sensitive data.

Security professional responsible for support of Business Continuity Planning.

How SecureVisio was invented?

EU's Innovative Economy Operational Programme co-founded SecureVisio project.

Inspiration of the project

was to achieve computer-aided IT security management, particularly business impact assessment conducted automatically during incident and vulnerability management.

Joint work of mathematicians and IT security experts

initial research in 2012, final research and development in 2013-2015.
